

INTRODUCTION TO COMPUTER ORGANIZATION AND ARCHITECTURE

Group project: instructions and guidelines

Han, Nguyen Dinh (han.nguyendinh@hust.edu.vn)

Faculty of Mathematics and Informatics
Hanoi University of Science and Technology

1. Preparation
2. Registration
3. Creation of your work plan

1. PREPARATION FOR YOUR GROUP PROJECT

Preparation for your group project

- ☒ You are required to work in a group of three to five students. Your group will make use of tools (e.g. VHDL or Verilog) to model and simulate computer hardware
- ▷ You are allowed to select other research topics like investigation into methods to improve or enhance the performance of computer systems; advanced architectures for modern computers (e.g. Quantum, DNA, CNTs computers)
- ▽ Then, you have to
 - 1) Identify your project theme and context
 - 2) Propose a name for your group project
 - 3) Find and save necessary resources (e.g. intended reading materials, source codes, etc.)

2. REGISTRATION OF YOUR GROUP PROJECT

Registration of your group project

☒ In order to register your group project, you have to give a short introduction to your group project. The following information should be included in your introduction

- 1) The project name and description
- 2) The concerning problem and its requirements
- 3) Your intended solutions (i.e. approaches, methods, tools, etc.)

NOTE ~~~ You will have 13 weeks to finish your project. The project themes can be shared among groups, but the project (e.g. methods or technologies used) of each group should be unique!

3. CREATION OF YOUR WORK PLAN

Creation of your work plan

☒ Your work plan should have the following components

- 1) Objective
- 2) Activities/tasks
- 3) Results
- 4) Who
- 5) When

THANK YOU VERY MUCH FOR YOUR ATTENTION!
