

Assignment for Lecture 12: Using Junit

Given a Date class with the following methods:

- `public Date(int year, int month, int day)`
 - `public Date() // today`
 - `public int getDay(), getMonth(), getYear()`
 - `public void addDays(int days) // advances by days`
 - `public int daysInMonth()`
 - `public String dayOfWeek() // e.g. "Sunday"`
 - `public boolean equals(Object o)`
 - `public boolean isLeapYear()`
 - `public void nextDay() // advances by 1 day`
 - `public String toString()`
- Come up with unit tests to check the following:
 - That no Date object can ever get into an invalid state.
 - That the addDays method works properly.

It should be efficient enough to add 1,000,000 days in a call.
