

Requirements for individual project 2

Individual project 2 is an extension of each student's project 1. In this project, students are required to demonstrate the following concepts:

- UML diagram
- Protected members: at least two protected members
- Derived Classes: at least 3 child classes that inherit from one or more base classes
- Virtual functions
- Polymorphism
- Multiple inheritance: At least one child class must inherit from two or more base classes simultaneously

Note: These concepts should be applied to solve practical, meaningful problems
