

Question 1 (2 pts)

Observe the following declarations:

```
class Node {
public:
    int data;
    Node* next;
};

Node *p1 = new Node, *p2 = new Node;

p1->data = 123;
p2->data = 456;

p1->next = p2;
p2->next = 0;

cout << p1->data << " " << p1->next->data;
```

What does this print?

Question 2 (1 pt)

The elements of a linked list are called values.

- ☐ True
 - ☐ False
-

Question 3 (1 pt)

In static array implementation of list, user is allowed to select the size of the list.

- ☐ True
 - ☐ False
-

Question 4 (1 pt)

List with dynamic elements must have a custom destructor.

- ☐ True
 - ☐ False
-

Question 5 (1 pt)

List should be allowed to shrink and grow so long as it is within 0 and maximum size limit.

- ☐ True
 - ☐ False
-

Question 6 (1 pt)

Insert and delete are the desired methods a list must have.

- ☐ True
 - ☐ False
-

Question 7 (1 pt)

In linked list implementation, we do not have to supply a constructor.

- ☐ True
 - ☐ False
-

Question 8 (2 pts)

Each element in a linked list has two parts.

Choose one:

- ☐ data and data

- ☐ data and next
- ☐ two addresses
- ☐ two values
