

# Week1 assignment

---

Welcome to CS2220 class. For the first week, all I want you to do is read the syllabus and download a Python IDE for you to write Python codes. You may follow textbook's instruction to download and install Anaconda or use whatever Python IDE, such as IDE from Python directly (<https://www.python.org/>). Personally, I like and used Python IDE for more than 10 years. For the very first assignment, I need you to be able to run the "Hello World!" program, simply using the code `print("Hello World!")` in your Python IDE and import **numpy** in your code. Again, you can use the textbook's instruction or search google for "Python pip numpy".

(This You tube video is pretty useful: [https://www.youtube.com/watch?v=EADe\\_5ffWnU](https://www.youtube.com/watch?v=EADe_5ffWnU))

Therefore, what you need to submit is a screenshot that you can successfully import numpy and print "hello World!" on your screen. For example:

```
IDLE Shell 3.13.4
File Edit Shell Debug Options Window Help
Python 3.13.4 (tags/v3.13.4:8a526ec, Jun  3 2025, 17:46:04) [MSC v.1943 64 bit (AMD64)] on win32
Enter "help" below or click "Help" above for more information.
>>> import numpy as np
>>> print ("Hello World!")
Hello World!
>>>
```
